OPERATION

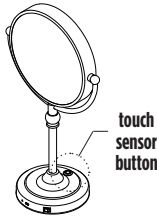

TURNING THE MIRROR ON/ OFF FOR THE FIRST TIME

- When first operating your mirror after taking it out of the box, use the USB charging cable and wall adapter to begin charging your new mirror.
- Before the mirror can be operated, the black toggle switch located on the back of the mirror base needs to be switched ON. A blue light will appear around the touch sensor button on top of the mirror base – indicating that the mirror is now ready for use.
- Tap the touch sensor button once to turn the mirror light ON. When turning the light on for the first time it will default itself to the Warm (3,000K) light setting (see more below).

CHANGING THE LIGHTING TEMPERATURE

- The Sunter 1x/7x Rechargeable LED Vanity Mirror has 3 lighting temperature settings: Warm (3,000), Indoor (5,000 K), and Natural Daylight (6,000 K). Steps to change the lighting temperature:
 - Turn the black ON/OFF toggle switch located on the back of the mirror base to ON. A blue light around the touch sensor button located on top of the mirror base will illuminate.
 - If the blue light around the touch sensor button does not illuminate, your mirror may not have enough charge in the battery. Use the wall adapter and USB charging cable to plug the mirror in. This will provide direct power from the outlet for immediate use while simultaneously charging the mirror for future cordless use.
- Tap the touch sensor button to turn the mirror light ON. When first turned ON, the mirror will start in the Warm (3,000K) color setting. Tap the touch sensor button again to change the lighting setting to the Indoor (5,000K) setting. A third tap of the touch

sensor button will change the lighting temperature to Natural Daylight (6,000K) setting – the coolest lighting temperature setting. Touching the sensor a fourth time will turn the mirror light OFF.

ADJUSTING THE MIRROR LIGHTS BRIGHTNESS

- In addition to the adjustable lighting colors, the Sunter 1x/7x Rechargeable LED Vanity Mirror also features adjustable brightness.
- To adjust brightness, first, choose 1 of the lighting color temperature settings by pressing the touch sensor one, two, or three times. Once you have found the temperature you would like, you can now adjust the brightness accordingly.
 - To decrease the brightness, once the desired lighting temperature setting has been selected, tap and hold your finger on the touch sensor button – this will gradually decrease the brightness of the mirror light. Lift your finger when the desired level of brightness appears.
 - To increase the brightness, tap and hold the touch sensor button until you notice the brightness decrease. Once you notice the brightness decrease, lift your finger off the touch sensor button and then immediately tap and hold the touch sensor button again – this step will increase the brightness of the light. Lift your finger when the desired level of brightness appears.

TURNING THE MIRROR LIGHT OFF

- The mirror light can be turned off by tapping the touch sensor button once when the mirror light is on the Natural Daylight (6,000K) setting – the third and final light setting.
- Even if the mirror light is turned OFF by using the touch sensor, the blue light will remain illuminated around the touch sensor button on top of the mirror base. This light will turn off when the entire mirror is switched OFF using the black toggle switch on the back of the mirror base.

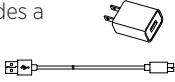

TURNING THE ENTIRE MIRROR OFF

- Use the black ON/OFF toggle located on the back of the mirror base to turn the entire mirror OFF. The black ON/OFF toggle switch will turn the mirror light OFF

as well as the blue light surrounding the touch sensor button.

- Use the black ON/OFF toggle switch to turn the mirror off when not in use when the mirror is being transported to prevent the mirror light from accidentally being turned on resulting in a draining of the battery's charge.

CHARGING THE VANITY MIRROR BATTERY

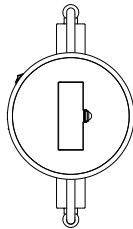

- The Sunter 1x/7X Rechargeable LED Vanity Mirror includes a 5V/10W wall adapter and a USB/USB-C charging cable 
- The mirror will take about 3 hours to fully charge after all the charge in the battery is used
- The mirror will still charge even if being used while it is plugged in

CLEANING YOUR MIRROR

- Unplug you mirror from a power outlet and remove the battery (see battery replacement instructions)
- Use a soft damp cloth to clean you mirror
- DO NOT wipe the battery compartment with the damp cloth
- Allow to the mirror to fully dry prior to plugging the mirror back into a wall outlet or replacing the battery.

BATTERY REPLACEMENT

- Before attempting to remove/replace the battery in your vanity mirror, turn the mirror OFF using the black toggle switch located on the back of the mirror base.
- Turn the mirror upside-down and pull the tab on the compartment door to open the battery compartment.
- Remove the battery from the battery compartment.
- Replace the battery in the battery compartment – be sure that the battery is positioned properly so that the positive and negative tips of the battery are oriented correctly.
- Once the battery has been properly inserted in the battery compartment, replace the battery compartment door.
- Your vanity mirror is not ready for use

WARNING

- Keep battery out of reach of children
- DO NOT expose the battery to heat or liquid
- DO NOT attempt to disassemble the battery
- In the unlikely event that the battery in your mirror fails, contact Blackstone International customer service (below) for battery servicing. Replacing the battery in your mirror with one that was not provided in the original contents or provided by Blackstone International/Sunter will void the mirror's warranty.

WARNING

TO REDUCE THE RISK OF BURNS, ELECTROCUTION, FIRE, OR INJURY TO PERSONS:

- DO NOT PUT INTO DIRECT SUNLIGHT. Be sure mirror is not in a position where it can reflect sunlight; reflected sunlight can cause fire
- Close supervision is necessary when the lighted vanity mirror is used by or near children or disabled persons
- DO NOT USE OUTDOORS
- Use the vanity mirror only for its intended purpose as described in these instructions DO NOT use attachments not recommended by the manufacturer.
- DO NOT operate where aerosol (spray) products are being used or where oxygen is being administered
- DO NOT submerge or operate near water
- Never operate the vanity mirror if the battery, charging cord, or wall adapter are damaged
- DO NOT operate the vanity mirror if it has been dropped, damaged, or dropped into water. Return the vanity mirror to a service center for examination, or repair. No repairs should be attempted by the consumer.
- Keep the charging cord and mirror away from heated surfaces

FOR HOUSEHOLD USE ONLY SAVE THESE INSTRUCTIONS

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation. This Class B digital apparatus complies with Canadian ICES-005.

TROUBLESHOOTING GUIDE

Problem	Solution
The mirror light will not turn on	<p>Turn the black toggle switch located on the back of the mirror base to the ON position – a blue light around the touch sensor button located on top of the mirror base will illuminate.</p> <ul style="list-style-type: none">• If the blue light on the top of the mirror base does not illuminate, your mirror's battery may lack enough charge to power the mirror – plug the mirror into a wall outlet using the charging cable and wall adapter. Your mirror can be used while it is charging. The mirror's battery will take about 3 hours to fully charge.• If the mirror's light still will not turn on after following these steps, please contact Blackstone International's customer service.
